

factorydesign Environment Policy

factorydesign is committed to minimising our impact on the environment as we deliver product, transport, packaging and sustainable design on a global scale.

This policy is factorydesign's public statement of our intentions and commitment for delivery and measurement of improved environmental performance.

As an organisation with a strong environmental mission and ethos we are committed to practice what we preach. In demonstrating this factorydesign strives to:

- Ensure that the best sustainable design practises are used throughout the design process
- Understand and implement steps to minimise the environmental impact of our offices, including waste production, electricity and gas usage
- Seek ways to minimise water use within day to day operations
- Reduce CO₂ emission levels and polluting factors in our everyday operation and in the work that we produce
- Increase recycling rates and green procurement
- Comply with all relevant environmental legislation and regulations
- Take into consideration broader environmental impacts in scoping capital projects and partnerships
- Promote the importance of the organisation's environmental standards and influence environmental best practice of key stakeholders, partners, suppliers and customers
- Deliver all factorydesign's products in the most sustainable possible manner

Successful delivery of this policy will incorporate

- Development of an environmental management system and environmental strategy
- Reduction of factorydesign's ecological footprint
- An annual critical review of factorydesign's environmental objectives and targets to enable continuous improvement

Peter Tennent, managing Director
